

SAFETY WITH ATP TESTING

Aftermath specializes in biohazard cleanup, with a focus on stringent disinfection practices verified by ATP testing. If a biohazard company does not use ATP testing it could leave you and your loved ones exposed to bloodborne pathogens containing viruses and bacteria.

PROVEN DISINFECTION

Aftermath uses portable Adenosine Triphosphate (ATP) fluorescence testing units in all mobile offices. This cutting-edge technology ensures measurable and accountable biohazard remediation.

WHAT IS ATP TESTING?

ATP testing detects organic material on surfaces, including walls, ceilings, and floors. It measures cell activity, identifying bloodborne pathogens such as viruses and bacteria.

WHY CHOOSE ATP TESTING?

ATP is a standard in food manufacturing, hospitals, and regulated industries for verifying cleanliness and compliance.

By focusing on stringent disinfection practices verified by ATP testing, Aftermath certifies a Zero RUI reading post clean-up and cleans until that is achieved, giving you peace of mind.

Contact us today to learn more about Aftermath's ATP testing and comprehensive biohazard cleanup services.

Call us anytime, day or night. We're here to help.
